What is Dilaudid?

Dilaudid is a highly potent opioid used to treat **moderate to severe pain**. It works by binding to specific receptors in the brain and spinal cord, helping to reduce the sensation of pain. It is often prescribed to patients who have not responded well to other pain medications or when pain is particularly severe.

Dilaudid is available in various forms, including **tablets, oral liquid, and injectable solutions**, providing flexible treatment options based on individual needs.
